DEAR RECRUITING MANAGER

I have been around computers for most of my life. It started when I was in elementary school and was introduced to Code.org. Since then, I have been invested in pursuing a bachelor's degree in Computer Science at the University of South Carolina. Google's Software Engineering Internship program appeals to me because of the opportunity to develop my personal and professional skills. I would love to work at a company as prestigious as Google. It would be a dream to be part of such a reputable company through the Software Engineering Internship program.

In the past I have worked on several minor projects where I have utilized Java. I have coded various programs using IDEs and worked with robotics throughout the course of my high school and college career. My effort and skill were evident, as I often scored top of the class.

During my freshman year of college at South Carolina, my team and I were tasked to create a website and app to solve a problem in day-to-day life. We agreed upon an app that allows users to view the status of gyms. This project helped me develop my HTML skills and think outside of the box. For the project to be successful, everybody in the team had to cooperate with each other and show responsibility. The project was successfully finished in December of 2022.

I believe that I would be a great fit for this internship program with my coding and professional skills. I look forward to being able to assist on the Google Software Engineering Internship program. Thank you for your time and consideration.

Sincerely,

Joshua Arega
